

Q3:

$x_v : \begin{cases} 1 & \text{if use vertex } v \\ 0 & \text{if not} \end{cases}$  } binary  
 $y_e : \begin{cases} 1 & \text{if use edge } e \\ 0 & \text{if not} \end{cases}$  } binary

$$y_{uv} \leq x_u, \quad y_{uv} \leq x_v$$

$y$ : spanning tree on induced graph.  
 $\sum y_e = \sum x_v - 1$

$$\forall S \subseteq V: \sum_{e \in E(S)} y_e \leq |S| - 1$$

~~To force  $y_{uv} = 1$  if  $x_u = x_v = 1$ : NOT HERE.~~  
 ~~$y_{uv} \geq x_u + x_v - 1$ .~~

Q5:

Hamiltonian path  $\rightarrow$  leaves.

So: use leaves as a subroutine to solve HP

Loop through all pairs

Pick pair of vertices  $u, v \in V$ .

Is there a spanning tree with leaves  $\{u, v\}$ ?

If YES: stop, have HP

end loop.
